Purodora
— LAB

Vegan & animal test-free

Natural ingredients

Made in Canada

Recyclable packaging

Biodegradable in 28 days, OECD 301-D

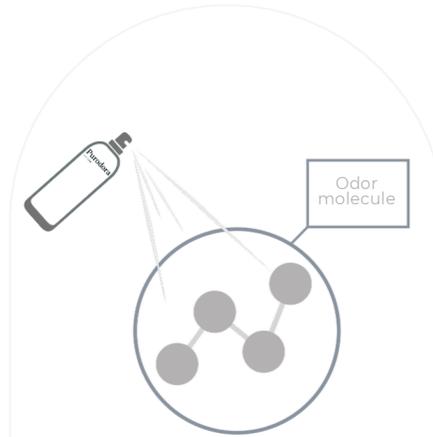

Molecular Odor-Neutralizing Technology

Odor molecules

Every odor has its own molecular structure and therefore requires a specific product.

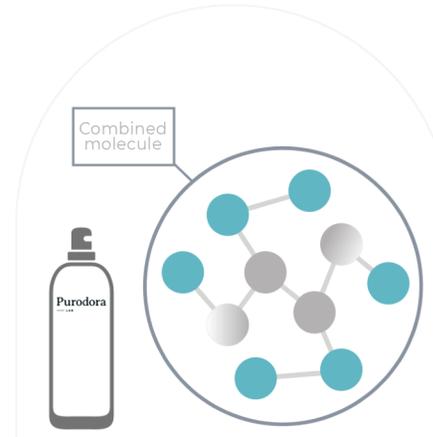

1

Compatible formulas

Purodora Lab odor neutralizers contain specific molecules that are compatible with the molecules causing the unwanted odor.

2

Molecular binding & neutralization

When the molecules in the odor neutralizer come into contact with odor-causing molecules, they bind together to form an entire new molecule.

This neutralizes the odor completely.

3

Well-being & harmony

The newly formed molecule no longer emits the unwanted odor, letting you - and those around you - breathe easy!
