2. HAZARD(S) IDENTIFICATION...

For Polymers:

Eyes:

OSHA classifies this material as particulates, not otherwise classified.

May be irritated by gross overexposure, no
Matter how generated. Keep dust out of eyes.

Skin:

May be irritated by gross overexposure, no
Matter how generated. May cause dryness.

Respiratory tract:

May be irritated by gross overexposure, no
Matter how generated.

For Calcium Carbonate:

Eyes:

May cause mild irritation including watering.

Respiratory tract:

Can be irritating, with symptoms including sneezing and nasal irritation.

Ingestion:

If the quantity is large, it may cause intestinal obstruction and/or
constipation.

For Benzoyl Peroxide:

Acute hazards: Eyes:

May cause severe irritation or damage.

Skin:

Non-irritating, although allergies have been noted in humans and guinea
pigs.

Inhalation:

May cause irritation of nose, throat and lungs.

Ingestion:

Considered to be non-toxic. May produce muscular weakness.

Chronic hazards: Skin:

Non-irritating. Prolonged and/or repeated skin contact may cause
irritation, defatting, dermatitis and sensitization. Repeated application
with a known carcinogen has enhanced skin tumors in mice.

Ingestion:

Long term dietary administration showed increased testicular atrophy in
rats.

CARCINOGENICITY:

Ethyl Acrylate is listed as a suspected human
Carcinogen by IARC, NTP, and ACGIH based on
animal studies. NIOSH lists Ethyl Acrylate as a
carcinogen without comment. IARC lists Benzoyl
Peroxide as not classifiable as to carcinogenicity to
humans. Calcium Carbonate contains crystalline silica
as a minor impurity. Crystalline silica is listed by IARC
as a pulmonary carcinogen in humans. None of the
other components of this material are listed by IARC,
NTP, OSHA, or ACGIH as carcinogens.

PRIMARY ROUTES OF ENTRY:

Inhalation, Skin or Eyes.
